

Sajal Chaplot

Work Experience

Builder.io | Product Designer

May '23 - September '26

Led **0→1 design** of Builder's Figma-to-code product, creating workflows that connected Figma designs to developers' codebases and enabled AI-assisted code generation. **Increased signups 2x**, and contributed to **4 enterprise deals representing \$1M+ ARR**

Redesigned Fusion's project setup experience using user-session analysis, customer feedback; simplifying code repository connection, **increasing project setup success by 60%**.

Identified friction across checkout through customer feedback, support tickets; redesigned self-serve billing experiences, **reducing billing related support tickets by 50%, increasing paid conversion by 10%, and contributing \$80K in ARR.**

Established foundations for Builder's product design system, aligning design and engineering around reusable patterns, naming conventions, and documentation across product surfaces

Led design across collaboration and AI workflows in Builder's vibe-coding product, including hosting, AI credits, commenting and agent-native experiences, partnering with product, engineering, and customer teams to take complex workflows from concept to production.

Planned and **led a live webinar** on 'How design teams use AI to prototype and ship without dev handoffs' leveraging Builder, **generating 550+ prospects**

Postman | Product Designer (Growth)

February '21 - January '23

Created user activation roadmap and led growth experiments, increasing **user activation by 15% within 3 months**

Improved **paid conversions by 30% and team activation by 30%** by designing onboarding and trial experiences for desktop and web applications

Advocated data-driven design and experimentation, establishing the growth design function and earned team's recognition.

Infosys | Lead Experience Designer

August '19 - February '21

Contributed to client pitches, helping secure a **~\$100K project** with a global beverage brand

Led UX research and experience design for web and mobile products across client engagements

Selected Work

AI & Automation

Figma Design to Code : Designed end-to-end UX for the Figma-CLI design system component mapper, reducing front-end development time by 70%

Agent-Native.com : Improved UX around 5 full fledged apps to drive signups on Builder

Growth & Monetization

Billing Improvements : Identified billing UX pain points, proposed product solutions, and delivered enhancements that boosted self-serve conversions and reduced support incidents.

Postman Free Trial : Contributed to product strategy for trial duration and cost management; designed experiences that led to a 30% increase in trial-to-paid conversion rates.

Funnels & Dashboards : Built amplitude dashboards to track self-serve upgrades and optimize billing conversion enabling faster insights across product and growth teams.

Design Systems & Quality Improvement

Design System Setup : Pitched and implemented foundational layer with usage guidelines in codebase solving UI inconsistencies across light and dark themes.

Design QA : Developed design QA processes and developer checklists, improving visual consistency and interaction quality across product releases.
